

Restaurant Industry Analysis during COVID-19

Joey Herzer, Kyle Mataloni,
Dillon Wiggishoff, Ahmed Zaki, Yuk Keung Wong

Topics for today

- ❖ Our Approach
 - Questions to answer
 - Data Sources
- ❖ Code Review for Data cleanup
- ❖ Visualizations
- ❖ Improvements
 - API Issue
 - Lessons Learned

Our Approach

- ❖ Wanted to understand the economic impact due to COVID-19 on the restaurant industry
- ❖ Used three data sources from Yelp
 - JSON File (2)
 - 'Yelp Fusion' API
- ❖ Issues with datasets
 - Two separate APIs
 - API limits 50 -> 1,000 records
 - Limit/Offsets
 - Limiting Parameters

Data Sources - Continued.

- ❖ After clean up and filtering our data did not allow for a total time-phased analysis - will be addressed later in improvements
- ❖ Our final output consisted of Yelp's Fusion API merged with a Yelp Covid JSON file that contained various pandemic related updates to restaurants where we hoped to draw several conclusions about the impact of the pandemic

	BusinessID	Name	Category	Closed	Rating	City	State
2889	Q6nhycv6JGREUjknLYz2wg	Someburros	Mexican	False	3.5	Phoenix	AZ
2923	gn9cc6-VLuCClqkWCtNcpg	Mi Pueblo Mexican Grill	Mexican	False	3.5	Charlotte	NC
2977	EPBEz9ifFo6JqPUUH_BdMg	Thai Thai Takeout	Thai	False	3.5	Charlotte	NC
3188	sjiTzC2aoy13iPulvk37Ew	Jet's Pizza	Pizza	False	4.5	Phoenix	AZ
3200	QDqn9XWn_B-Rbc0DDMEljw	Yummy Crab	Seafood	False	3.5	Charlotte	NC
...
28794	3MntE_HWbNNoyiLGxywjYA	Toppers Pizza	Pizza	False	3.5	Charlotte	NC
28846	JvCuy7FEZoiZ-7cABfHKSA	PT Pho Express	Vietnamese	False	4.0	Phoenix	AZ
28860	AjWFFZN8KwyqJzzi0DyEsw	Burger Brasserie	Burgers	False	3.5	Las Vegas	NV
28867	_mg5bYknpZgaWSfjQVmrJQ	Spinato's Pizzeria	Pizza	False	4.0	Phoenix	AZ
28870	iAu8s96GKQ73Xe7j_2GyCQ	Jackson's Bar & Grill	Sports Bars	False	4.0	Las Vegas	NV

Code Review

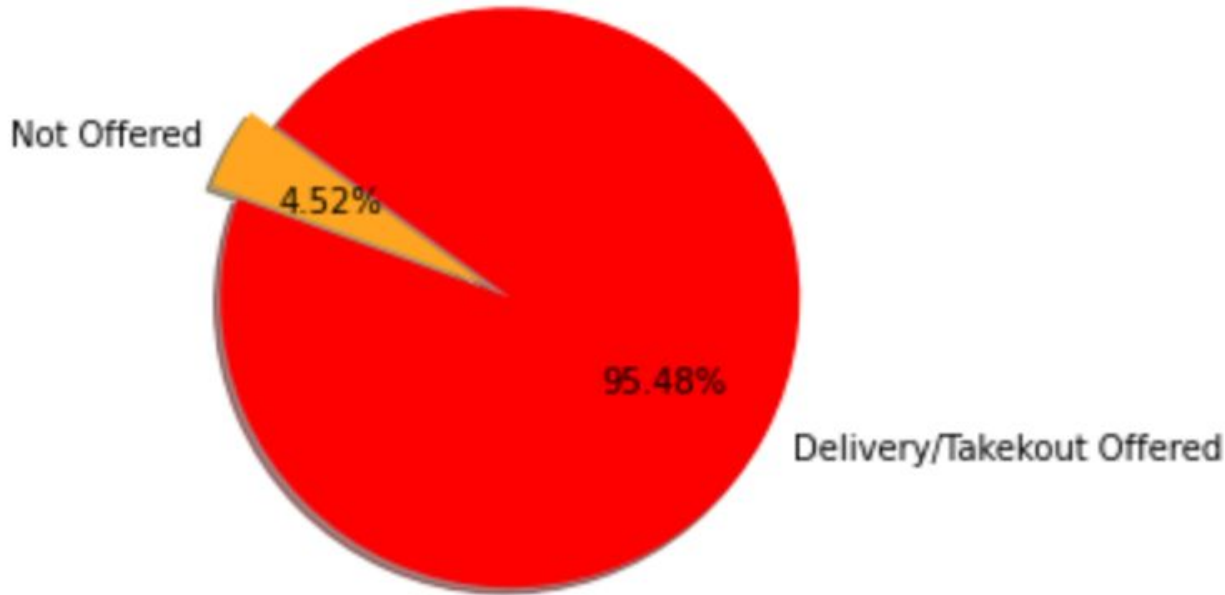

Impacts on different cuisine by analyzing the status of rating in different cities:
Higher the average rating, better performance

	Name	means
0	Phoenix	4.107
1	Charlotte	3.986
2	Las Vegas	4.208

Observation: Delivery and Takeout are Essential to Survival and Growth

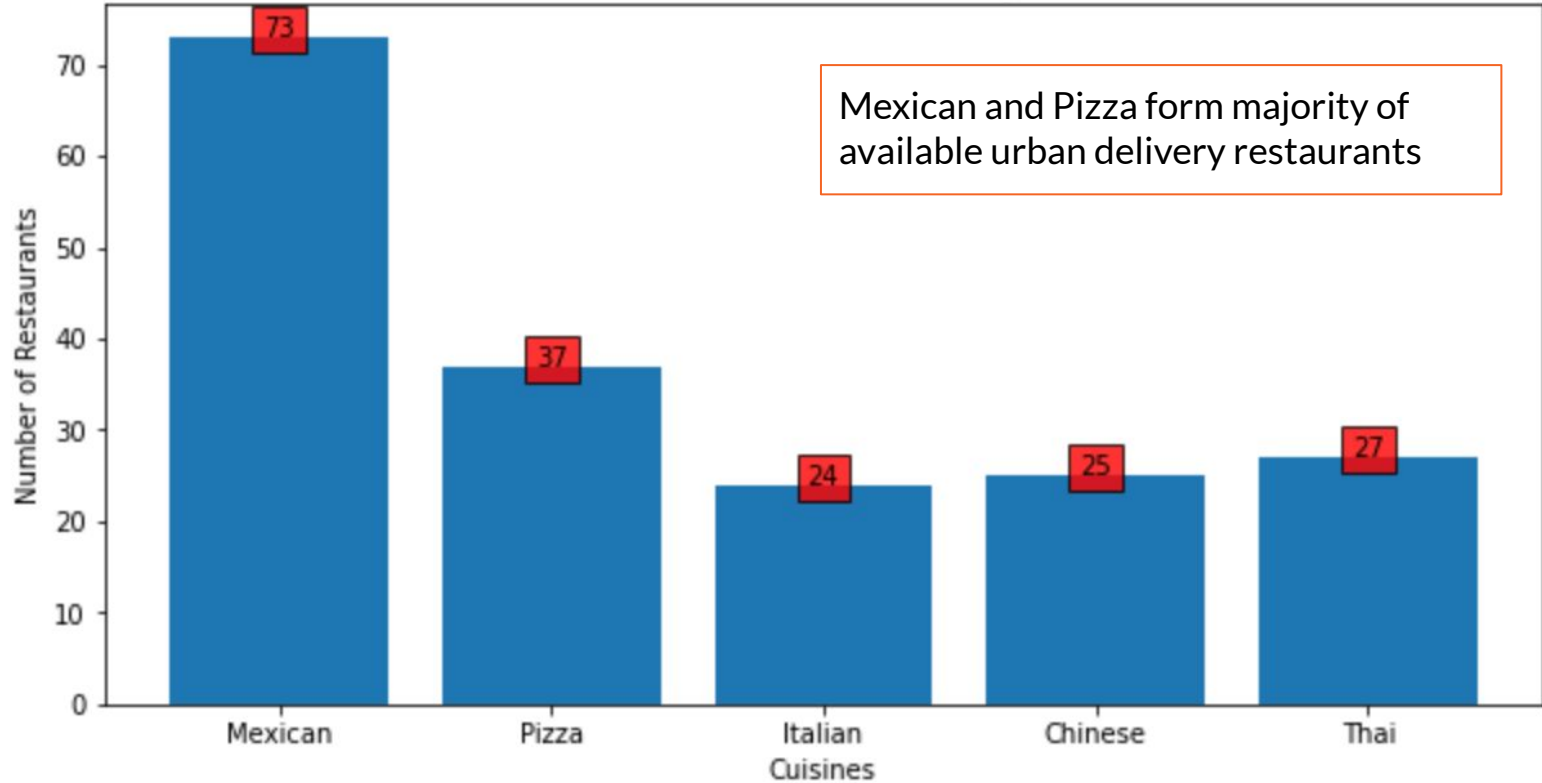

Percentage of Restaurants w/Delivery /Takeout

Baseline value
(Pre-COVID) =
64.70%

An increase of
30.78%
=
monumental
shift

Grubhub Enabled Restaurants by Cuisine

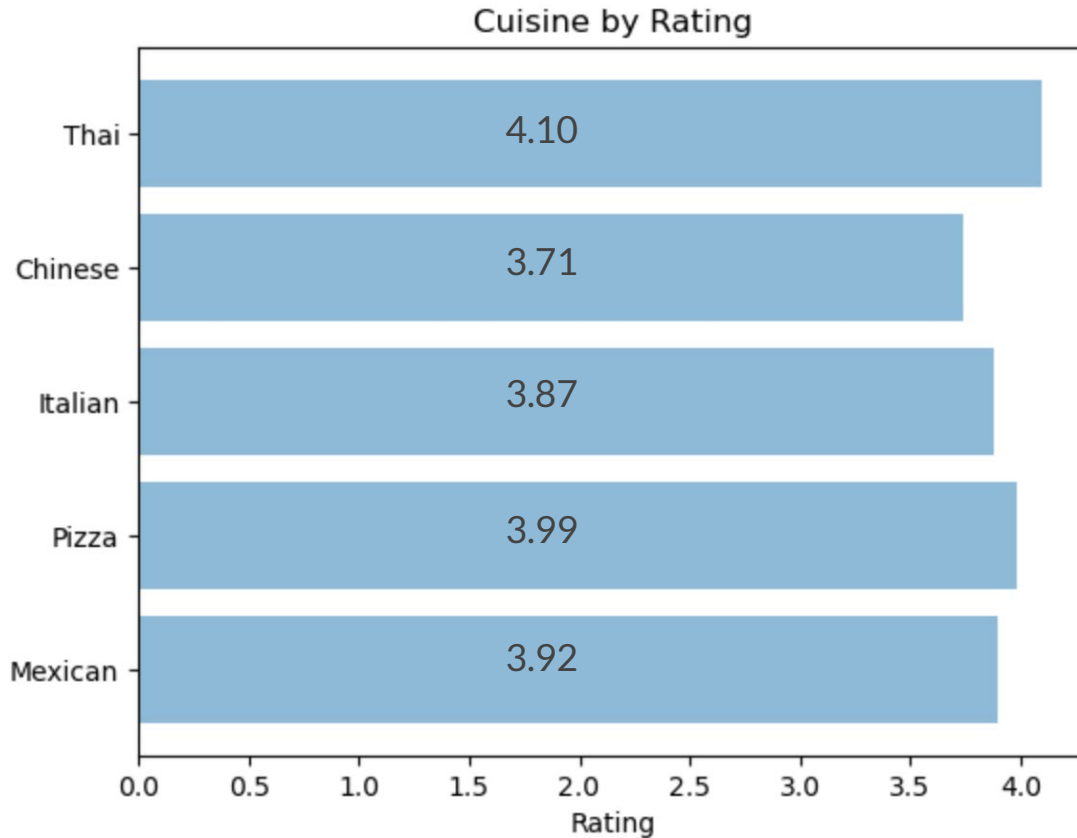

— Observation: Thai, Pizza and Mexican Places proportionally form majority of delivery-enabled restaurants

Roughly equal distribution by top 5 cuisines

Cafes and Coffee Shops were the lowest in comparison (less than <1%)

Observation: Restaurants that deliver correlate with higher rating

Rating range
=
2.5 - 5.0

P value =
0.036

Significant
Correlation

Improvements

Working with this API had its limitations:

→ **Limited Dataset**

-Shows only current data

-Variables with more insight:

Price Category, Temporarily Closed,
Permanently Closed, Transaction Type

→ **Public Dataset**

- To gain insight growth and survival, variables to include:

Revenue, # of employees, consumer interest,
marketing cost, internal costs vs baseline values

'Most variables are available with Yelp Developer Beta Program

Improvements

Working with this API had its limitations:

→ **Timeframe**

- Shows only current data

- Timeframe set between **March 2020 - May 2021** of aforementioned variables

→ **Geographic Impacts**

- Dataset focuses on 4 urban cities, comparison needed with suburban and rural areas to compare COVID-19 impact
- Use of Heat Map on focused area (Chicagoland area, 50 mile radius)
